

Carbon-Smart Farming

Introduction to 21st Century Agriculture

regenerate soil biology, grow nutrient-dense food
produce renewable biofuel, sequester carbon

9am-4pm Saturday, November 1
Woodpecker Farm

390 Woodpecker Lane, County Road 831, Thornfield, MO

A new biological agriculture has emerged to improve fertilizer efficiency, grow crops with superior nutrition, cut soil erosion, curb water pollution, support local community economy. This new farming is *climate-smart* to improve community food security & resilience, mitigate global warming, adapt to impacts of climate change.

This new, fully probiotic agriculture boosts soil carbon, balances minerals, revives **Soil Food Webs**. Full spectrum fertility and thriving soil life grows crops with optimum nutrients, maximum health, minimal stress.

Benefits for growers are many:

- Stable soil moisture
- Greater fertilizer efficiency
- Reduced fertilizer use
- Lower input expenses
- Higher yields
- Higher crop nutrition
- Loose, soft, open soil structure
- Insect & disease resistance
- Greater drought tolerance
- Less leaching & nutrient loss
- **Save Money**

David Yarrow writes, teaches and demonstrates probiotic methods & materials of 21st Century sustainable farming, such as biochar, compost, sea minerals, microbe inoculants, powdered rock, foliar sprays. **David** advocates **Locally Integrated Food & Energy (LIFE)** to restore community economics.

FRIDAY EVENING EVENT
5:30pm community potluck
7pm free public talk

L.I.F.E.

Locally Integrated Food & Energy
rebuilding rural economies

\$50 donation

family discount

includes lunch, literature
& ingredients for soil trial

reservations recommended

overnight rooms at Woodpecker Lodge

to register, send check to:
